

PRODUCT

Code:

Clearboard

Date Issued: Monday, 18 May 2009

Clearboard: is a range of DIY boards that provide clear, knot-free grain in lengths of up to 1820mm Length

Japanese Reference Sizing Chart – DIY Board

Clearboard DIY Board is available in the following profiles and sizes:

Thickness (mm)	Width (mm)
19	38
19	63
19	90
19	115
19	139
19	184
19	284

Lengths

450
600
910
1820

From our Forests to your Home

We grow the trees in our own forests, mill the timber, and manufacture the end product; providing you with a single point of trust.

The Clearboard range is manufactured from Plantation Grown Radiata Pine Trees grown in New Zealand. The branches on the lower 6 metres of the trees are pruned off during their 30-year growing cycle to produce long clear lengths of wood to be used in these Premium Panel & Board Products.

Radiata Pine seedlings were imported from Monterey, California back in the early 1930's and have established well in the NZ climate. Radiata Pine grows productively with the warm days and cool nights of the NZ coastal climate.

The Clear Select Grade Pine Board can be used in a wide range of interior furniture or interior DIY projects and renovations.

Features and Benefits

1. **SOLID WOOD STRENGTH:** The solid pine board will not deflect under loading like MDF or chipboard – so in shelving applications the shelves do not dip and buckle when loaded.
2. **SOLID WOOD WORKABILITY:** The Solid Pine cuts, drills, machines, glues much easier than PLY or MDF. Routing profiles into either the edge or end grain produces very smooth and quality results even for a novice handyman. There is no need to add glued clashing strips to the cut edges, as the panel is solid throughout with no change in density or finish.
3. **CONSISTENCY OF GRADE:** The board is a premium clear grade so boards can be combined in a renovation or project without there being knots or blemishes appearing in the finished project. Stock turns on FIFO basis without customers needing to pick over a whole rack of panels to find the “one they like”.
4. **FINISHING:** Radiata Pine is the most adaptive softwood species for staining to different colours. The very low resin content of Radiata Pine means that any colour stains applied soak in evenly and produce a very consistent finish. MDF absorbs stains very inconsistently and needs many additional coats until a consistent coverage is achieved.
5. **DURABLE:** The Board is primarily designed for interior applications but can withstand infrequent wetting without any loss of strength or size.
6. **ECO FRIENDLY:** The panel is made from certified sustainable plantation forests in New Zealand. These forests are managed under strict guidelines set by the internationally recognised Forest Stewardship Council (FSC).
7. **COST EFFECTIVE:** The Boards are made in an automated production facility which means that the retail price point is still very competitive to a furniture manufacturer compared to them making up a single laminated panel for their application.
